

Project Demonstration: System Walkthrough

This demonstration highlights the end-to-end functionality of the **AI-Powered Lead Generation System**, showcasing the seamless transition from raw prospect interaction to structured Salesforce data.

1. AI-Driven Engagement (The Front-End)

- **Demonstration:** Show the [Agentforce AI Assistant](#) in action. The demo begins with a prospect initiating a chat.
- **Key Action:** The AI proactively engages the user, successfully gathering key qualification parameters (Industry, Intent, Contact Info).
- **Result:** This proves that the system captures high-quality, structured data without requiring any manual data entry from the sales team.

2. Automated Pipeline Processing (The Back-End)

- **Demonstration:** Navigate to the Salesforce [Flow Builder](#) interface to show the active logic.
- **Key Action:** Demonstrate how the system triggers immediately after the AI session ends. Show the automated creation of the Lead record and the subsequent calculation of the `AI_Engagement_Score__c`.
- **Result:** This confirms that the backend is fully automated, removing the manual "Data Entry" and "Lead Scoring" bottleneck.

3. Lead Routing & Notification

- **Demonstration:** Display the Sales Representative's view.
- **Key Action:** Show an incoming "Hot Lead" notification. Open the Lead record to demonstrate how the `Interaction_Summary__c` field provides the sales rep with the full context of the AI conversation.
- **Result:** This validates that the sales rep is now empowered to begin high-value selling immediately, armed with full prospect context.

4. Verification & Integrity

- **Demonstration:** Refer back to the [UAT testing screenshots](#) to confirm that the system handles "Create," "Edit," and "Delete" operations reliably.

- **Result:** This establishes system trust and confirms that the AI and automation layers are stable for production use.
