

Technology Stack

This details the specific tools and platforms utilized in your build.

- **Core CRM Platform:** [Salesforce CRM \(Lightning Experience\)](#). This provides the underlying object-oriented database (Lead, Opportunity, Account) and the security framework for user roles and profiles.
- **AI Engine (Conversational Intelligence):** [Salesforce Agentforce](#) (formerly Einstein Copilot). This manages the natural language processing (NLP) and conversational logic that facilitates real-time interaction with prospects.
- **Automation Engine (Logic & Routing):** [Salesforce Flow Builder](#). This is the primary engine for automating business logic, managing lead status transitions, and handling lead-assignment notifications.
- **Data Migration & ETL:** [Data Loader / Import Wizard](#). These tools ensure the mapping of complex data schemas from external sources into the Salesforce environment, maintaining integrity during large-scale lead imports.
- **Version Control & Documentation:** [GitHub](#). The centralized repository for all configurations, including architecture diagrams, UAT evidence, and change management documentation, ensuring a single source of truth for the project lifecycle.
